

AWS Assignment

Course Name & Code: AWS

Instructor: Nitha

Assignment Details

Assignment Title: Task #48795 - Static Website hosting with AWS S3

Date: April 16, 2026

Student Information

Name: Sameer Malik

Email: sameermalik.dev@gmail.com

Instructions and Guidelines

Objective

1. Create a S3 bucket inside your aws instance.
2. change the properties of the bucket so that it allows website hosting.
3. add a simple static website to the S3 created.

***Note: try with a simple index.html file.**

4. check the required permission/access control of the bucket.
5. verify the working using the endpoint of the bucket.

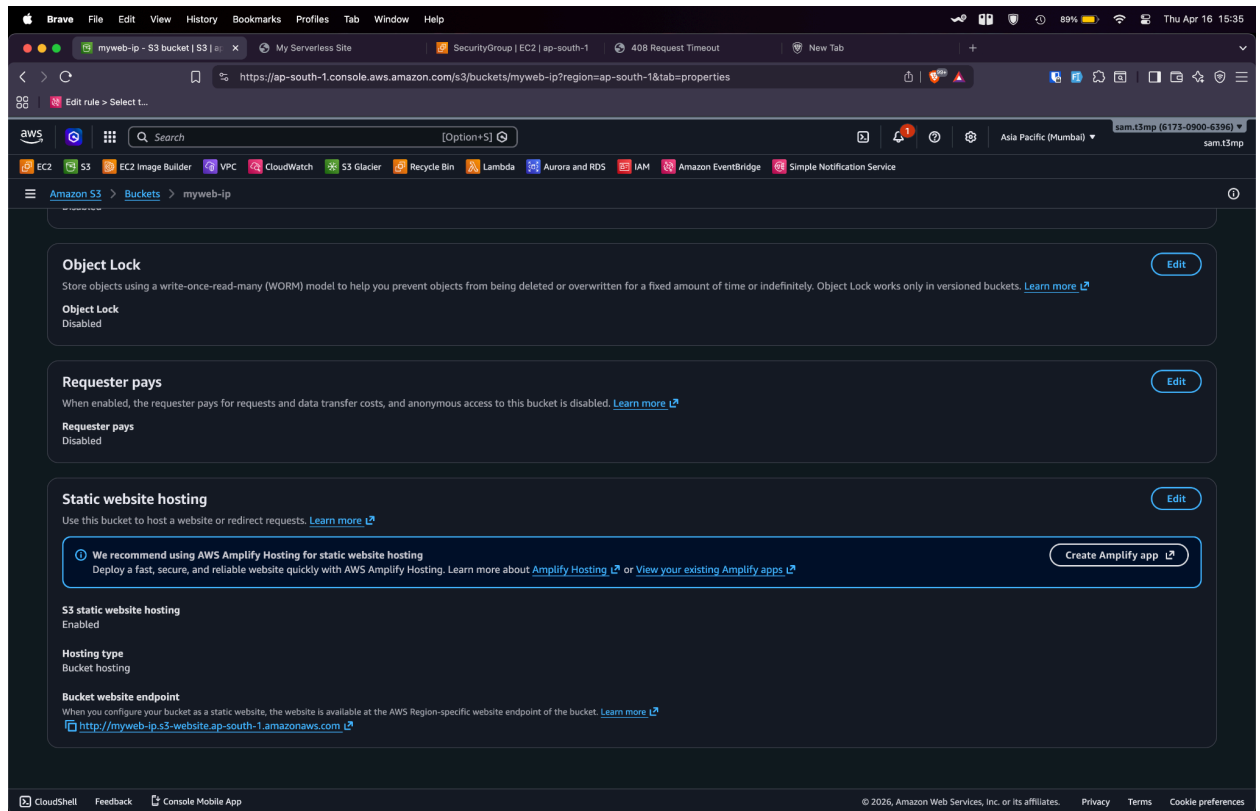

Result

1. Bucket Creation

A new S3 bucket named myweb-ip was created in the **Asia Pacific (Mumbai) ap-south-1** region. This serves as the root container for the website files.

2. Static Website Hosting Configuration

Under the **Properties** tab, the "Static website hosting" feature was enabled. The index.html file was designated as the default index document.

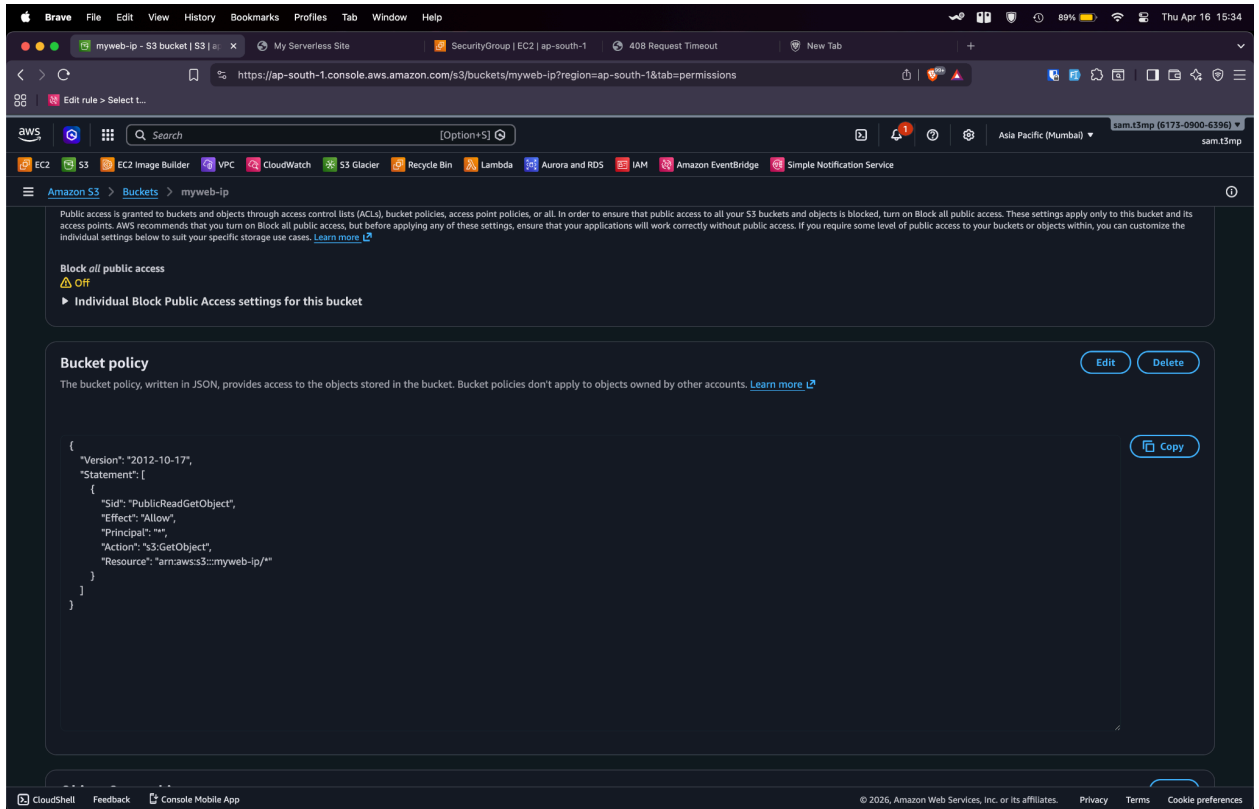

3. Permissions and Access Control

To allow the public to view the website, two critical security changes were made:

- **Public Access:** "Block *all* public access" was turned **Off**.
- **Bucket Policy:** A JSON policy was added to allow s3:GetObject actions for all users (*).

Applied Policy:

Bucket Endpoint:

<http://myweb-ip.s3-website.ap-south-1.amazonaws.com>
