

AWS Assignment

Course Name & Code: AWS

Instructor: Nitha

Assignment Details

Assignment Title: Task #48800 - WordPress hosting with AWS RDS

Date: April 17, 2026

Student Information

Name: Sameer Malik

Email: sameermalik.dev@gmail.com

Instructions and Guidelines

Objective

- i. Launch a AWS instances (OS can choose by your choice)
- ii. Host WordPress files under a user directory
- iii. Create an RDS instance
- iv. Connect RDS Database with your WordPress and run webpage using URL myawshosting.net

NB: Only Minimum access is granted

1. User Directory Hosting

WordPress files were moved from the default web root to a secure user-owned directory at /home/ec2-user/public_html. Apache and SELinux were configured to allow the web server to serve content from this home directory.

2. Local Database & phpMyAdmin

A local MariaDB database named wp_local was initially used to host the site data. phpMyAdmin was installed and configured to manage this local instance efficiently.

- **Verification:** phpMyAdmin shows all 12 standard WordPress tables (e.g., wp_posts, wp_users) successfully created in the local database.

3. AWS RDS Creation & Security

A managed RDS instance was created using the MySQL engine. To ensure "Minimum Access," the RDS Security Group was configured to strictly allow inbound traffic on port 3306 only from the Private IP address of the EC2 web server.

4. Migration & RDS Connection

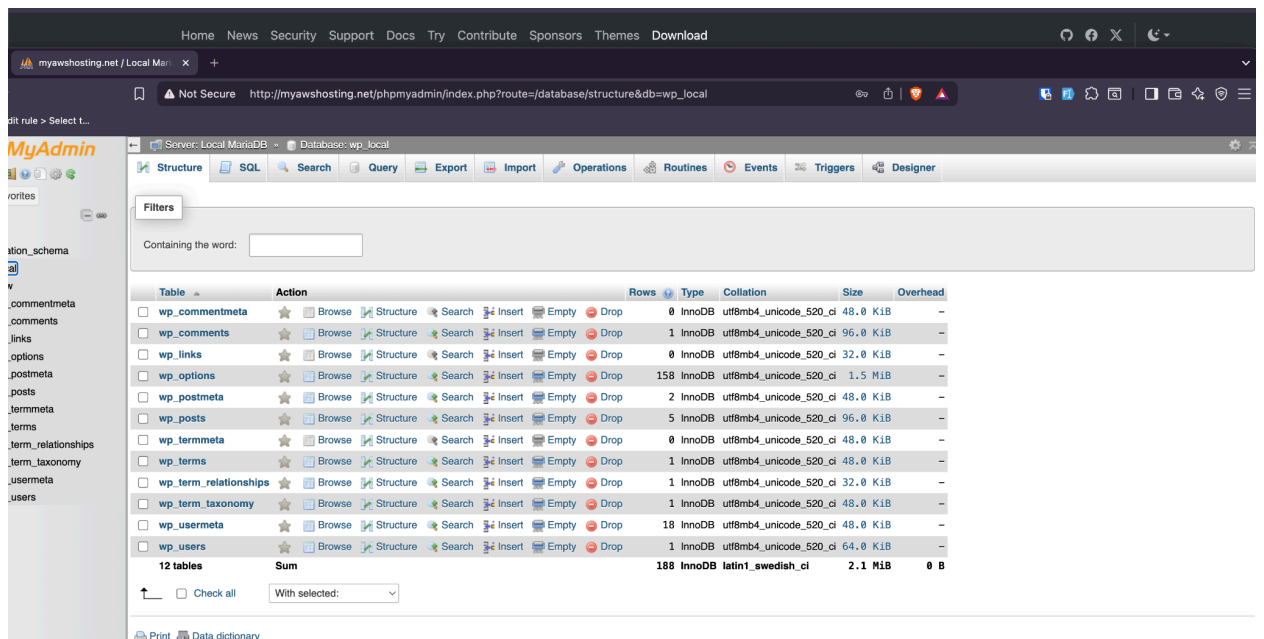

The local database was exported and imported into the RDS instance. The wp-config.php file was updated with the following production credentials:

- **DB_NAME:** wp_local
- **DB_USER:** admin
- **DB_HOST:** database.c1uwuwcgwz4y.ap-south-1.rds.amazonaws.com

5. Final Verification

The website is fully operational and accessible via the custom URL mapping.

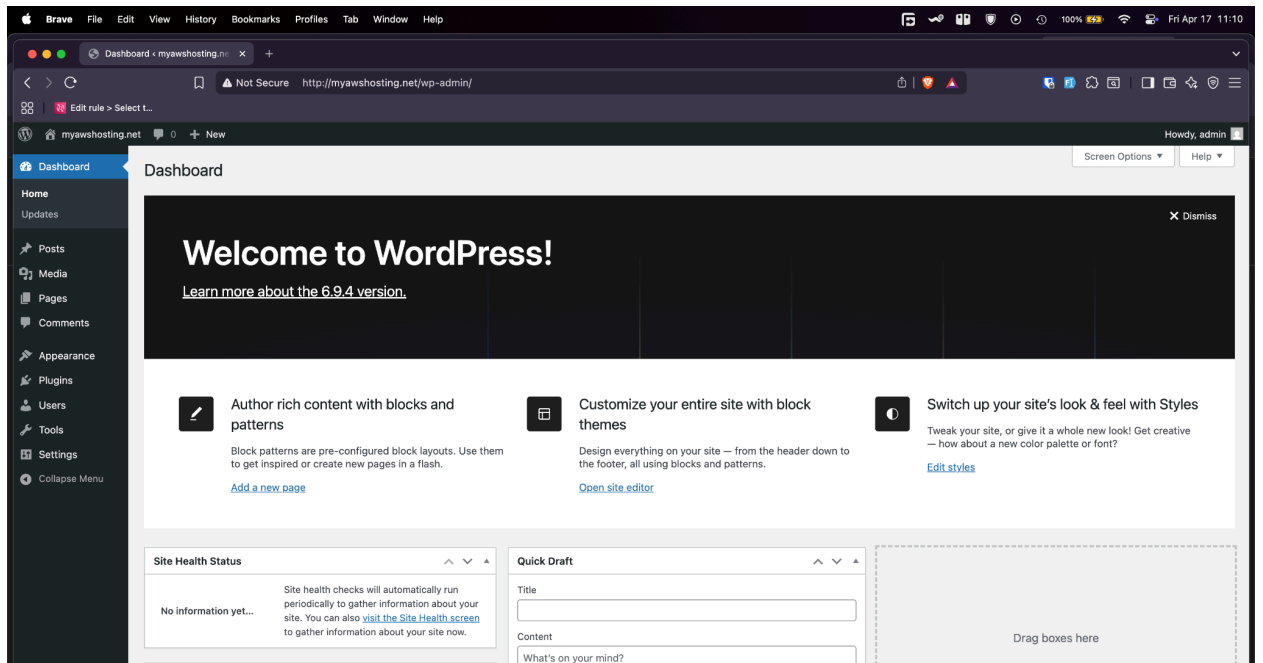

- **Live Site:** The WordPress site "mytestsite" is running correctly at the designated host.
- **Admin Access:** The WordPress Dashboard is accessible, confirming a stable connection between the RHEL 9 web server and the AWS RDS backend.

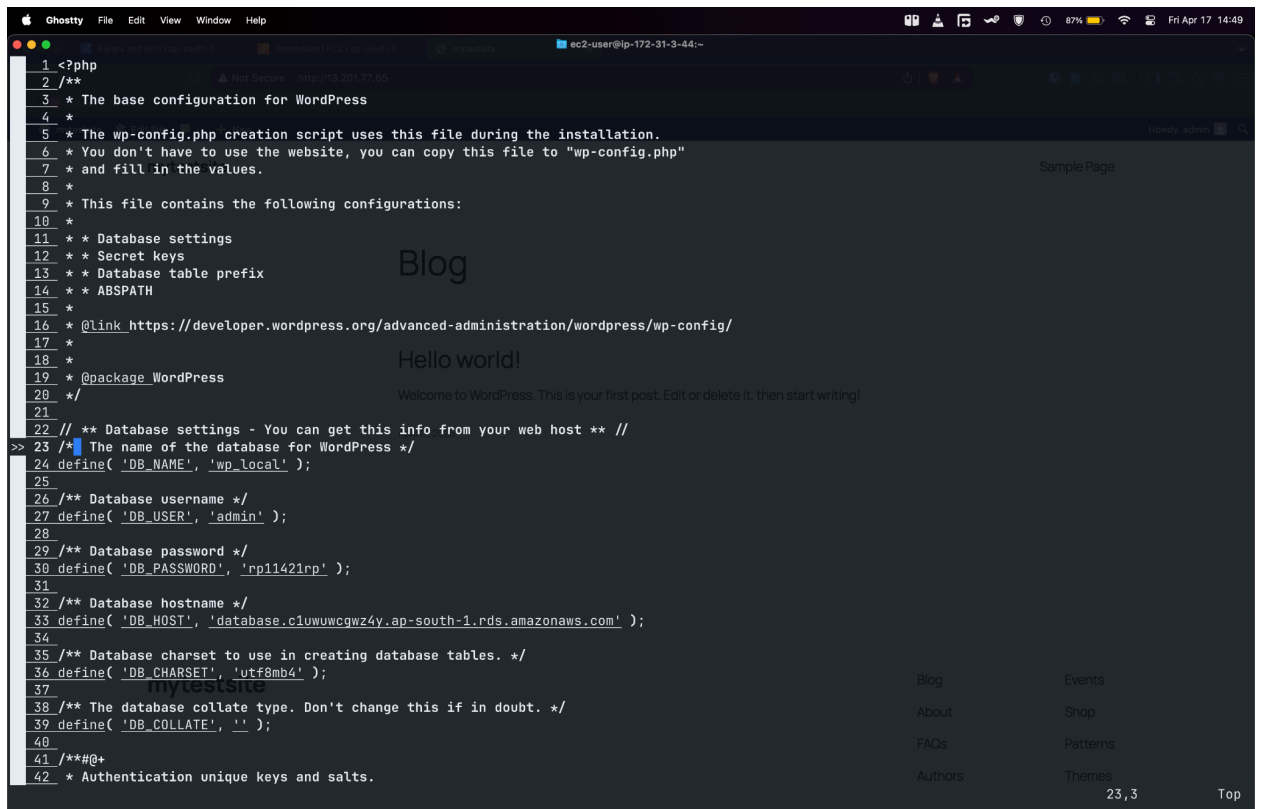

The screenshot displays the phpMyAdmin web interface for a database named 'wp_local'. The left sidebar shows a tree view of the database schema, including tables like 'commentmeta', 'comments', 'links', 'options', 'postmeta', 'posts', 'termmeta', 'terms', 'term_relationships', 'term_taxonomy', 'usermeta', and 'users'. The main panel shows the 'Structure' tab for the 'wp_local' database. A table of 12 tables is listed, each with columns for 'Table', 'Action', 'Rows', 'Type', 'Collation', 'Size', and 'Overhead'. The tables are: wp_commentmeta, wp_comments, wp_links, wp_options, wp_postmeta, wp_posts, wp_termmeta, wp_terms, wp_term_relationships, wp_term_taxonomy, wp_usermeta, and wp_users. The 'wp_options' table has 158 rows, while the others have 1 or 0 rows. The 'wp_posts' table has 5 rows. The 'wp_usermeta' table has 18 rows. The 'wp_comments' table has 1 row. The 'wp_term_taxonomy' table has 1 row. The 'wp_term_relationships' table has 1 row. The 'wp_termmeta' table has 0 rows. The 'wp_links' table has 0 rows. The 'wp_postmeta' table has 2 rows. The 'wp_commentmeta' table has 0 rows. The 'wp_comments' table has 1 row. The 'wp_links' table has 0 rows. The 'wp_options' table has 158 rows. The 'wp_postmeta' table has 2 rows. The 'wp_posts' table has 5 rows. The 'wp_termmeta' table has 0 rows. The 'wp_terms' table has 1 row. The 'wp_term_relationships' table has 1 row. The 'wp_term_taxonomy' table has 1 row. The 'wp_usermeta' table has 18 rows. The 'wp_users' table has 1 row. The 'Sum' row shows a total of 188 rows across all tables, with a total size of 2.1 MiB and 0 B overhead.

Table	Action	Rows	Type	Collation	Size	Overhead
wp_commentmeta	Browse Structure Search Insert Empty Drop	0	InnoDB	utf8mb4_unicode_520_ci	48.0 K	0 B
wp_comments	Browse Structure Search Insert Empty Drop	1	InnoDB	utf8mb4_unicode_520_ci	96.0 K	0 B
wp_links	Browse Structure Search Insert Empty Drop	0	InnoDB	utf8mb4_unicode_520_ci	32.0 K	0 B
wp_options	Browse Structure Search Insert Empty Drop	158	InnoDB	utf8mb4_unicode_520_ci	1.5 M	0 B
wp_postmeta	Browse Structure Search Insert Empty Drop	2	InnoDB	utf8mb4_unicode_520_ci	48.0 K	0 B
wp_posts	Browse Structure Search Insert Empty Drop	5	InnoDB	utf8mb4_unicode_520_ci	96.0 K	0 B
wp_termmeta	Browse Structure Search Insert Empty Drop	0	InnoDB	utf8mb4_unicode_520_ci	48.0 K	0 B
wp_terms	Browse Structure Search Insert Empty Drop	1	InnoDB	utf8mb4_unicode_520_ci	48.0 K	0 B
wp_term_relationships	Browse Structure Search Insert Empty Drop	1	InnoDB	utf8mb4_unicode_520_ci	32.0 K	0 B
wp_term_taxonomy	Browse Structure Search Insert Empty Drop	1	InnoDB	utf8mb4_unicode_520_ci	48.0 K	0 B
wp_usermeta	Browse Structure Search Insert Empty Drop	18	InnoDB	utf8mb4_unicode_520_ci	48.0 K	0 B
wp_users	Browse Structure Search Insert Empty Drop	1	InnoDB	utf8mb4_unicode_520_ci	64.0 K	0 B
12 tables	Sum	188	InnoDB	latin1_swedish_ci	2.1 M	0 B
